

# Stent House Foundations

## ENDERBY, LEICESTERSHIRE

### KEY DETAILS

#### // CLIENT

Miller Homes

#### // JOB SPECIFICATION

Design and build foundation package for three detached units to include piles and beams

#### // STRUCTURAL ENGINEER

Miller Homes

Stent House Foundations was tasked by Miller Homes to design and build a foundations package for three detached units in Enderby, Leicestershire.

The site was formerly a petrol station and garages. The underground fuel storage facilities had to be removed after demolition of the buildings and a full remediation of the ground and soils was undertaken meaning that localised piling was required.

Stent House Foundations installed 48, 235mm<sup>2</sup> pre-cast piles of lengths of six metres with a design undertaken to the clients' site investigation and house type drawings.

# Stent House Foundations lived up to its reputation for providing skilled, on-time and on-budget delivery.

The foundations were installed to an agreed programme to the satisfaction of the client.

The project was a success because it was a full regeneration of a site that was contaminated and originally considered unsuitable for habitation.
