

Stent House Foundations

Stent House Foundations design and build foundation packages for not only the housing market but also schools, community amenities and light commercial projects.

// TECHNIQUE / SERVICES

- Total foundation solutions
- Design and build packages
- Precast ring beams and floors that suit all pile types
- In-situ schemes designed and installed
- Cost effective reduced build programme
- Quality assured factory produced components
- Installation service by CSCS accredited controllers
- Driven precast piles from 190mm² to 350mm²
- Continuous flight auger piles
- Geothermal piles

Stent House Foundations

We offer a fully integrated package including complete design, manufacture and installation of piles, beams and floors.

// PEOPLE

We have experienced employees through all levels of the business, from the bidding and design stage through to the installation and completion of projects. We also have the full support of Balfour Beatty Ground Engineering and can rely on this resource to ensure you receive a fully integrated solution for all your foundation requirements.

// PREVIOUS EXPERIENCE

We have completed foundation projects throughout the UK for major housebuilders and construction companies. Whatever your foundation requirements, Stent House Foundations have the experience to aid your project.

// WE OFFER

- On-site support
- Fully managed installation supervision
- Bespoke design packages from pile only schemes to full system including floors
- Non weather dependent fixing
- Comprehensive design service
- Single source manufacturer for piles and beams to ISO5000
- Fully managed deliveries to site
- Phased completion to suit your programme

// TESTIMONIAL

"I feel that in today's climate in the construction industry I have to make comment on your company's performance. From the start when you came to site you were professional. I would like to thank you and your team for a first class job."
